## Profile

---

*I am a passionate Java developer with 6+ years of experience, possessing a strong foundation in Java SE, EE, Spring Framework, and its ecosystem. I specialize in crafting robust, high-performance, and scalable backend applications within a microservices architecture. Proficient in Java Core, Design Patterns, OOP principles and problem solvings.*

## Working Experience

---

Java Backend Developer | FPT Software, Ltd. | Aug. 2019 – Feb. 2022

---

➤ **FSOFT Academy | Aug. 2019 – Dec. 2019 | On-job training**

- Role: **Java Developer**
- Learning and mastering the Java programming language and its core concepts.
- Staying updated with the latest Java features and best practices.

➤ **Quodient | Dec. 2019 – Apr. 2020 | Size: 10-50**

- Role: **Java Backend Developer**
- Developing and maintaining Java-based applications and services for logistic domain.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Working in a team to create and maintain robust, scalable and maintainable backend applications based on Spring Framework.

➤ **Viettel Digital Service | Apr. 2020 – Feb. 2020 | Size: 10-25**

- Role: **Java Backend Developer**
- Developing and maintaining Java-based applications and services for fintech domain.
- Working in a team to create and maintain robust, scalable and maintainable backend applications based on Spring Framework and others legacy systems.

➤ **MB Bank | Feb. 2022 – May. 2023 | Size: 20**

- Role: **Java Backend Developer**
- Developing and maintaining Java-based applications and services (for banking systems).
- Supporting migration from old systems into new ones.
- Optimizing SQL queries and making necessary changes to databases to ensure the smoothness and the stability of querying operations (reduced the memory usage by almost 50%, and execution time from 6 seconds to 0.5 seconds)
- Staying updated with the latest Java features and best practices.
- Creating, improving and maintaining code base, served as templates for Spring-based services.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Working in a team to create and maintain robust, scalable and maintainable backend applications based on Spring Framework.
- Participating in code reviewing and supporting other more junior members.

➤ **Crowdfunding & Investment | Jul. 2023 – present | Size: 10-20**

- Role: **Java Backend Developer**
- Developing and maintaining Java-based applications and services (for crowdfunding systems).
- Supporting migration from old systems into new ones and dockerizing them for AWS-based services.
- Optimizing SQL queries and making necessary changes to databases to ensure the smoothness and the stability of querying operations.
- Staying updated with the latest Java features and best practices.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Working in a team to create and maintain robust, scalable and maintainable backend services based on Spring Framework.
- Learning new technologies (Typescript, Python).
- Working directly and closely with clients and devops engineers to fix and maintain mission-critical functions of the production services.
- Writing necessary tools to support data retrieval for clients.
- Tinkering services to ensure the performance and eliminate memory leakage (adjusting JVM parameters, eliminate bottlenecks and resource-consuming functionalities, using batches to eliminate memory overflow errors caused by overeager data fetching operations, etc.).
- Participating in code reviewing and supporting other more junior members.

## Side projects

---

- Spring Base (containing everything had learned so far, using Spring Boot 3)
- QR Code Generator (using simple library to generate QR Code)
- A simple program to add hardcoded subtitles into a video using FFMPEG (written in C#)
- Contributing to GrowthBook Java SDK
- A TikTok channel aimed to showcasing and giving tips and tricks for Java development

## Education

---

INet-NIIT College | Jan. 2012 – Jul. 2014

---

## Skills & Abilities

---

- Programming languages: **Java** (8, 11, 17 and 21), **HTML/CSS/Javascript/Typescript, Python, Markdown**
- Frameworks: **Hibernate, Spring Framework, Spring Boot** (2 and 3), Spring ecosystems (**Spring Data JPA, Spring Security**, JWT-based authentication/authorization, **Spring Scheduling, Spring Actuator**, etc.), **FastAPI, SQLAlchemy**
- IDEs: **Eclipse, NetBeans, IntelliJ IDEA, Visual Studio Code, PyCharm**
- Relational DBMS: **PostgreSQL, MySQL/MariaDB, Oracle Database**
- No-SQL: **MongoDB**
- Tools: **Git, Apache Kafka, Redis, Elasticsearch, Docker, Postman** (/w script), **AWS** (S3, SQS, RDS), **JIRA, Confluence, Notion, Sentry.io, Growthbook.io, Keycloak, VisualVM** (used to monitor the resource allocations and consumptions)
- Methodology: **Waterfall, Agile/Scrum**
- AI tools: **ChatGPT, Gemini, Claude, Microsoft Copilot, JetBrains AI**
- Design patterns: **Singleton, Factory, Template, Decorator, Builder**

## Languages

---

- **Vietnamese** (native)
- **English** (proficient)

## Certificates & Achievements

---

- Oracle Certified Associate, Java SE 8 Programmer (issued on 2021-07-31)
