Profile

I am a passionate Java developer with 7+ years of experience, possessing a strong foundation in Java SE, EE, Spring Framework, and its ecosystem. I specialize in crafting robust, high-performance, and scalable backend applications within a microservices architecture. Proficient in Java Core, Design Patterns, Clean Code, OOP principles and problem solving. Embracing the agentic, automated coding spirit with the help of A.I tools.

Technology Experiences

Programming languages

- **Java SE (8, 11, 17, 21, 25), EE, Python (3), HTML5/CSS/JavaScript/TypeScript**
- **Windows Command Batch, Linux Bash**

Frameworks & Libraries

Hibernate, Spring Boot (Spring Data, Spring JPA, Spring AOP, Spring Security OAuth2, Spring Schedule, Cache), **Liquibase, Flyway, Lombok, Mapstruct, JWT** (jjwt, Auth0 JWT), **QueryDSL, OpenFeign client, OpenAPI Swagger, JUnit** (4, 5), **Mockito, Testcontainers, Python** (SQLAlchemy, Pydantic, Django, FastAPI)

Architectures

Microservices, Monolith

Methodologies

Waterfall, Kanban, Agile/Scrum

Relational DBMS(s)

Microsoft SQL Server, PostgreSQL, MySQL/MariaBD, PL/SQL Oracle Database

NoSQL

MongoDB, ElasticSearch

Tools & Others

NetBeans IDE, Eclipse, IntelliJ IDEs, VisualVM, DBeaver, Git, SVN, Postman /w Script, Apache Kafka, RabbitMQ, Redis/Caffeine, AWS SDK (S3, SQS), GrowthBook, Sentry.IO, Notion, JIRA, Confluence, Docker Desktop, Claude Code

Design patterns

Singleton, Factory, Template, Decorator, Builder, IoC

Operating Systems

Windows, Linux Debian (Ubuntu)

Working Experience

Java Backend Developer | SETA International, Ltd. | Jul. 2025 – present

➤ AERIS Communication

- Developing and maintaining Java-based applications and services.
- Optimizing SQL queries and making necessary changes to databases to ensure the smoothness and the stability of querying operations.
- Staying updated with the latest Java features and best practices.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Participating in code reviewing and supporting other more junior members.
- Technology stack: **Java 17, 21, Microservices, Docker, Spring Boot, JUnit, Mockito, MySQL/MariaDB, Oracle Database, PostgreSQL, Testcontainers** (Spring Integration Test).

Java Backend Developer | MSB | Feb. 2025 – Jul. 2025

➤ Digital Channel

- Developing and maintaining Java-based applications and services.
- Optimizing SQL queries and making necessary changes to databases to ensure the smoothness and the stability of querying operations.
- Staying updated with the latest Java features and best practices.

- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Participating in code reviewing and supporting other more junior members.
- Customizing KeyCloak's internal SPI to accommodate business-specific requirements.
- Studying basic essentials about BackBase technology (used by some banks).
- Technology stack: **Java 21, Microservices, Docker, Spring Boot, BackBase, JUnit, Mockito, MySQL/MariaDB, Oracle Database, KeyCloak, MinIO.**

Java Backend Developer | CMC GLOBAL, Ltd. | Jul. 2023 – Dec. 2024

- Crowdfunding & Investment | Jul. 2023 – present | Size: 10-20
- Developing and maintaining Java-based applications and services.
- Supporting migration from old systems into new ones and dockerizing them for AWS-based services.
- Optimizing SQL queries and making necessary changes to databases to ensure the smoothness and the stability of querying operations.
- Staying updated with the latest Java features and best practices.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Working in a team to create and maintain robust, scalable and maintainable backend services based on Spring Framework.
- Learning new technologies (Typescript, Python).
- Working directly and closely with clients and DevOps engineers to fix and maintain mission-critical functions of the production services.
- Writing necessary tools to support data retrieval for clients.
- Tinkering services to ensure the performance and eliminate memory leakage (adjusting JVM parameters, eliminate bottlenecks and resource-consuming functionalities, using batches to eliminate memory overflow errors caused by overeager data fetching operations, etc.).
- Participating in code reviewing and supporting other more junior members.
- Technology stack: **Java 17, Microservices, AWS & SDK (S3, SQS/SNS, CloudWatch), Spring Boot, JUnit, Mockito, Python (SQLAlchemy, FastAPI, Django), MySQL/MariaDB, PostgreSQL, Docker, Sentry.IO, GrowthBook, GitHub Action.**

Java Backend Developer | TTC Solutions, JSC. | Feb 2022 – May. 2023

➤ MB Bank | Feb. 2022 – May. 2023 | Size: 20

- Developing and maintaining Java-based applications and services (for banking systems).
- Supporting migration from old systems into new ones.
- Optimizing SQL queries and making necessary changes to databases to ensure the smoothness and the stability of querying operations (reduced the memory, and execution time from 6 seconds to 0.5 seconds)
- Staying updated with the latest Java features and best practices.
- Creating, improving and maintaining code base, served as templates for Spring-based services.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Working in a team to create and maintain robust, scalable and maintainable backend applications based on Spring Framework.
- Participating in code reviewing and supporting other more junior members.
- Technology stack: **Java 11, Microservices, Spring Boot, ElasticSearch, PL/SQL Oracle Database, Redis, JUnit, Mockito.**

Java Backend Developer | FPT Software, Ltd. | Aug. 2019 – Feb. 2022

➤ Viettel Digital Service | Apr. 2020 – Feb. 2022 | Size: 10-25

- Developing and maintaining Java-based applications and services for fintech domain.
- Working in a team to create and maintain robust, scalable and maintainable backend applications based on Spring Framework and others legacy systems.
- Technology stack: **Java 8, Java 11, Spring Boot, Hibernate, MariaDB, PL/SQL Oracle Database, Kafka, Redis, MinIO, MongoDB.**

➤ Quodient | Dec. 2019 – Apr. 2020 | Size: 10-50

- Developing and maintaining Java-based applications and services for logistic domain.
- Writing unit tests, ensuring code coverage and minimize the likeliness of edge case bugs.
- Working in a team to create and maintain robust, scalable and maintainable backend applications based on Spring Framework.
- Technology stack: **Java 8, Spring Boot, Docker, RabbitMQ, SOAP, JUnit, Mockito.**

- FSOF Academy | Aug. 2019 – Dec. 2019 | On-job training
- Learning and mastering the Java programming language and its core concepts.
- On-job training
- Technology stack: **Java 8, Java EE, Spring Boot, SVN.**

Side Projects & Activities

- GitHub PoC Projects at <https://github.com/vulinh64>
 - Backend: <https://github.com/vulinh64/spring-base>
 - Support Backend: <https://github.com/vulinh64/spring-base-event>
 - Frontend: <https://github.com/vulinh64/spring-base-frontend>
 - Orchestrator: <https://github.com/vulinh64/spring-base-squad>
- A simple hobby blog (<https://vulinhjava.io.vn/>) written in React/Docusarus.
- Contributing to **GrowthBook** Java SDK and other open source projects.

Education

INet-NIIT Academy | Jan. 2012 – Jul. 2014

Languages

- **Vietnamese** (native)
- **English** (proficient)

Certificates & Achievements

- Oracle Certified Associate, Java SE 8 Programmer (issued on 2021-07-31)
 - https://www.credly.com/badges/e3e232b7-8c2c-490e-b63d-e10a42ba248d/public_url
