

Vu Linh Nguyen

Java Backend Developer

nguyenvulinh64@gmail.com | linkedin.com/in/vulinh64 | github.com/vulinh64

Professional Summary

Java backend developer with 7+ years of experience building and maintaining applications and services in fintech, banking, telecommunications, crowdfunding, and logistics. Experienced with Java, Spring Boot, microservices, relational databases, and cloud integrations. Skilled in SQL optimization, legacy system migration, performance tuning, unit and integration testing, and production support. Experienced in applying AI throughout software development and building reusable AI workflows for engineering teams with IDE analysis, MCP integrations, and Python automation.

Technical Skills

- Languages: Java SE (8, 11, 17, 21, 25), Java EE, Python 3, JavaScript, TypeScript, HTML5, CSS, Bash, Windows batch scripting
- Backend frameworks and libraries: Spring Boot, Spring Data, Spring JPA, Spring AOP, Spring Security OAuth2, Spring Scheduling, Spring Cache, Hibernate, QueryDSL, OpenFeign, Lombok, MapStruct, Liquibase, Flyway, JWT, OpenAPI/Swagger
- Python frameworks and libraries: FastAPI, Django, SQLAlchemy, Pydantic
- Databases and search: PostgreSQL, pgvector, MySQL, MariaDB, Microsoft SQL Server, Oracle Database (PL/SQL), MongoDB, Elasticsearch
- Testing: JUnit 4/5, Mockito, Testcontainers, unit testing, integration testing
- Messaging, caching, and cloud: Apache Kafka, RabbitMQ, Redis, Caffeine, AWS SDK (S3, SQS/SNS), AWS CloudWatch, MinIO
- AI Agents: Codex/ChatGPT, Claude Code, corporate-internal AI toolset.
- AI-assisted development: Reusable AI skills, Python workflow automation, Model Context Protocol (MCP) servers for GitHub, Jira, and Confluence, IntelliJ IDEA's built-in MCP server, third-party MCP integrations, retrieval-augmented generation (RAG) prototyping, pgvector
- Tools and practices: Gradle, Maven, Docker, Git, SVN, GitHub Actions, Postman, Jira, Confluence, Sentry, GrowthBook, Agile/Scrum, Kanban, code reviews, design patterns

Professional Experience

Software Engineer | Rikkeisoft JSC. | Jun. 2026 – Present

- Develop and maintain multiple services in a microservices architecture using Java 17, Spring Boot, Gradle, and Maven.
- Use AI throughout the development workflow for code exploration, implementation, analysis, and debugging.
- Build reusable AI skills that invoke Python scripts for repetitive, deterministic tasks, making those workflows easier for the team to run consistently.
- Prototype a RAG-like documentation system using PostgreSQL, pgvector, and neural weighting to explore AI-assisted access to technical documentation.
- Develop AI workflows for the team using MCP servers for GitHub, Jira, and Confluence, IntelliJ IDEA's built-in MCP server for IDE analysis and debugging, and a range of third-party MCP plugins.

Freelance Java Developer | Feb. 2026 – June 2026

- Develop and maintain Java applications and services using Java 21, Spring Boot, microservices, Docker, and PostgreSQL.
- Write unit tests with JUnit and Mockito to maintain coverage and reduce edge-case defects.
- Use Claude Code to support development workflows.

Java Backend Developer | SETA International, Ltd. | Jun. 2025 – Mar. 2026

- Project: AERIS Communication
- Developed and maintained Java backend applications and services.
- Optimized SQL queries and updated databases to improve query stability.
- Wrote unit and integration tests using JUnit, Mockito, and Testcontainers; participated in code reviews and supported junior team members.
- Used AI tools for code generation, code review, and workflow hooks in day-to-day development.
- Technologies: Java 17/21, Spring Boot, microservices, Docker, MySQL/MariaDB, Oracle Database, PostgreSQL.

Java Backend Developer | MSB | Feb. 2025 – Jul. 2025

- Project: Digital Channel
- Developed and maintained Java backend services for a banking digital channel.
- Optimized SQL queries and updated databases to improve query stability.

- Customized Keycloak's internal SPI for business requirements; participated in code reviews and supported junior team members.
- Wrote unit tests with JUnit and Mockito and studied Backbase technology.
- Technologies: Java 21, Spring Boot, microservices, Docker, Backbase, MySQL/MariaDB, Oracle Database, Keycloak, MinIO.

Java Backend Developer | CMC GLOBAL, Ltd. | Jul. 2023 – Jan. 2025

- Project: Crowdfunding and Investment | Team size: 10–20
- Developed and maintained Spring Boot backend services in a microservices architecture.
- Supported migration from legacy systems and containerized services for AWS deployments.
- Optimized SQL queries and databases; worked with clients and DevOps engineers to resolve production issues.
- Tuned JVM parameters, removed performance bottlenecks, and introduced batch processing to prevent out-of-memory errors from excessive data fetching.
- Built tools to retrieve data for clients; wrote unit tests, reviewed code, and supported junior team members.
- Technologies: Java 17, Spring Boot, AWS (S3, SQS/SNS, CloudWatch), Docker, Python (SQLAlchemy, FastAPI, Django), MySQL/MariaDB, PostgreSQL, JUnit, Mockito, Sentry, GrowthBook, GitHub Actions, React.

Java Backend Developer | TTC Solutions, JSC. | Feb. 2022 – May 2023

- Project: MB Bank | Team size: 20
- Developed Java backend services for banking systems and supported migration from legacy systems.
- Optimized SQL queries and database operations, reducing execution time from 6 seconds to 0.5 seconds and lowering memory usage.
- Created and maintained reusable codebases for Spring-based services.
- Wrote unit tests, reviewed code, and supported junior team members.
- Technologies: Java 11, Spring Boot, microservices, Elasticsearch, Oracle Database (PL/SQL), Redis, JUnit, Mockito.

Java Backend Developer | FPT Software, Ltd. | Aug. 2019 – Feb. 2022

- Project: Viettel Digital Service | Apr. 2020 – Feb. 2022 | Team size: 10–25
 - Developed and maintained Java backend services for fintech applications using Spring Boot and legacy technologies.
 - Technologies: Java 8/11, Spring Boot, Hibernate, MariaDB, Oracle Database (PL/SQL), Kafka, Redis, MinIO, MongoDB.
-

- Project: Quodient | Dec. 2019 – Apr. 2020 | Team size: 10–50
- Developed and maintained Java backend services for logistics applications; wrote unit tests with JUnit and Mockito.
- Technologies: Java 8, Spring Boot, Docker, RabbitMQ, SOAP, JUnit, Mockito.
- Training: FSOF Academy | Aug. 2019 – Dec. 2019
- Completed on-the-job training in Java, Java EE, Spring Boot, and SVN.

Projects and Open Source

- Java backend proof-of-concept projects: <https://github.com/vulinh64>
- Spring backend: <https://github.com/vulinh64/spring-base>
- Supporting backend service: <https://github.com/vulinh64/spring-base-event>
- Frontend: <https://github.com/vulinh64/spring-base-frontend>
- Orchestration: <https://github.com/vulinh64/spring-base-squad>
- Personal blog built with React and Docusaurus: <https://vulinhjava.io.vn/>
- Contributor to the GrowthBook Java SDK and other open-source projects.

Education

INet-NIIT Academy | Jan. 2012 – Jul. 2014

Posts & Telecommunications Institute of Technology | Aug. 2026 - present

Certification

Oracle Certified Associate, Java SE 8 Programmer | Issued Jul. 31, 2021

Credential: https://www.credly.com/badges/e3e232b7-8c2c-490e-b63d-e10a42ba248d/public_url

Languages

Vietnamese: Native

English: Proficient
